COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

BUREAU OF AGRICULTURAL ECONOMICS

COTTON PRODUCTION IN LOUISIANA, 1928-1937

- By Parishes -

Acreage planted to cotton in Louisiana during the past ten years has ranged from 1,201,000 acres in 1934 to 1,983,000 acres in 1930. The small acreage in 1934 resulted in large part from acreage reduction under contract with the Agricultural Adjustment Administration. Approximately 447,000 acres of cotton were removed from cultivation under the terms of the first cotton program in 1933.

Yield per acre during the period has varied from 172 pounds in 1930 and 1932 to 336 pounds in 1937. Low yields in these years were due to decreased applications of fertilizer and to material weevil damage. In 1928 the yield fell to 176 pounds as a result of an unfavorable spring and heavy weevil infestation. In 1933 the low yield of 174 pounds was due largely to excessive rainfall and weevil damage. Beginning in 1934 and culminating with the all-time record of 336 pounds in 1937, yields have been relatively high, the result of the use of the better lands, increased use of fertilizer, lower losses from insects, and to favorable picking weather.

Except when localized conditions such as rains and floods reduced the crop, as a rule acreage, yield and production had a tendency to vary in the parishes in conformity with the changes in the State as a whole.

In the tables production of cotton is given in 500-pound gross weight bales. It has ranged from 477,000 bales in 1933 to 1,104,000 bales in 1937. The 1933 production was the lowest since 1923 when 368,000 bales were made.

Estimates of production are based upon the ginnings within each parish compiled by the Bureau of the Census. Adjustments have been made for the cross-county movement of seed cotton.

Estimates of acreage planted are based upon the censuses of 1925, 1930 and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, and current reports from crop correspondents.

The yield per acre estimates are based upon yields computed from bales and acres reported to the Bureau of the Census in census years and upon current reports from the cotton correspondents. Estimates of acreage and yield in the parishes have been reconciled with the estimates of production.

H. H. Schutz
Agricultural Statistician
